Summary

Well-Organized **Native Android Developer** with a strong foundation in **Java**, **Kotlin**, **Jetpack Compose** and architecture patterns like **MVP** and **MVVM**. Seeking to increase my technical skills with **latest technologies**, **best practices** and to Collaborate with other Engineers to build Useful and Helpful Moblie Applications to solve real world issues and make people's live easier and better.

Education

Information Technology Institute (ITI), 9-Months Program in Native Mobile Development Oct 2024 – present

- Modern Android Development using Java and Kotlin

Helwan University, BS in Computer Science Oct 2020 – June 2024

- GPA: 3.33/4.0 **Very Good** with honor degree

Projects

Mealano, Food Planner Application [Github](#) 

- built using **Java** and **MVP** architecture.
- implemented concurrency using **RXJava**
- Used **Room Database** for offline usage
- Integrated with **Firestore Database** to add the sync Feature for plans
- Used **Retrofit** to handle Restful Api Requests

Recipe App (ITI Summer Training Graduation Project) [Github](#) 

- A smart recipe app that leverages modern Android libraries such as **Retrofit**, **Room**, and **Fragment Navigation**. It offers seamless API integration, advanced data management, and intuitive navigation, delivering a polished and user-centric culinary experience.
- Colaborated with **Team of 4** Android developers to build this project.
- Developed **Recipe Details Fragment** which is responsible for displaying recipe details via calling a GET request to a **REST API** with a handling to No Network cases.
- Designed the UI with **XML** with third-party libraries like **Glide** to handle images loading
- Implemented best practices in architecture with **MVVM** and **Repository** Design Pattern.

Password Manager [Github](#) 

- application for password Generation and Management.
- Developed using **Kotlin** and **Jetpack Compose** for a modern and efficient user interface.
- Leveraged **Room** database for robust local data storage for Generated Passwords.
- Integrated **Navigation Component** to ensure a smooth and intuitive user experience within the app.
- Implemented **Dependency Injection using Hilt** to handle dependencies across the whole project.
- Built with **Clean Architecture** using **Use Cases**

Twitter Clone [Github](#) 

- **UI-Only** clone for Famous app Twitter. using common jetpack compose ui components like Scaffold and Navigation Drawer
- Developed solely to hone my skills in building user interfaces using **Jetpack Compose**
- This project replicates the core **UI** elements of the popular social media platform Twitter

Skills

Technologies: Kotlin, Jetpack Compose, Retrofit, Room, Date Store, Naavigation Compose, Hilt, Coil, Java, Firebase (Basic Knowledge), Unit Testing (Basic Knowledge), Instrumentation Testing (Basic Knowledge).

Tools: Android Studio, Android SDK, Gradle, Version Control System via Github and Git

Soft Skills: Stratigic Thinking, Analytical Thinking, Openness, Time Management, Supportive Team Player, Active Learner
